PROFILE

I build thoughtful, reliable mobile and interactive products, and help teams deliver them. I have 25+ years in software engineering, with experience spanning mobile and web products, engineering leadership, platform architecture, application security, and applied AI. Engineering Manager at Brivo. Open to Staff/Principal mobile and product engineering and selected hands-on leadership roles. Remote US.

CORE CAPABILITIES

Mobile and web: Swift, Kotlin, React Native, TypeScript, web applications, and GraphQL APIs.
Platforms: cloud, connected-device, and distributed systems; C++, Go, Python, and Java.
Leadership: hands-on architecture, technical direction, mentoring, cross-functional delivery.
Applied AI: planning, review, development, testing, verification, and failure triage.
Application security: threat modeling, secure code review, application-layer testing.

RECENT EXPERIENCE

Brivo | Engineering Manager

September 15, 2026 - Present
Previously Team Lead Engineer | January 2, 2024 - September 14, 2026

Engineering leadership on a cloud access-control platform. Uses AI-enabled SDLC planning, review, development, testing, and verification, alongside production-error investigation and build/test failure triage.

Riffle Analytics | Lead AI and Mobile Engineer

February 2019 - December 2023

Built native mobile applications in Swift, Kotlin, and C++, supported by Python and Node.js data pipelines. Combined hands-on architecture, privacy, and delivery practices.

VividCloud | Principal Software Engineer 2

August 2020 - November 2023

Reviewed architecture and code across engineering teams, including mobile and distributed systems. Conducted application security assessments and worked with delivery teams on remediation and secure design.

Shawn Campbell

Experience and selected public work

PRODUCT AND PLATFORM EXPERIENCE

GrowFlow Corp | Mobile Engineering Lead and Manager

May 2019 - August 2020

Built and led a mobile engineering team shipping React Native and TypeScript products. Designed backend services and GraphQL APIs with role-based access, data integrity, resilience, and peer review.

Minnow | Director of Engineering, Mobile

January 2018 - December 2019

Led mobile architecture and delivery in Swift and Kotlin for connected-device systems. Coordinated mobile, hardware, and backend work across Go, Elixir, and Python services.

Vox Media | Application Security Engineer

June 2017 - August 2018

Performed internal red-team operations, penetration testing, vulnerability research, and proof-of-concept exploit development. Partnered with application teams on secure code review, threat modeling, remediation, and SecDevOps.

Vets First Choice | Director of Engineering - Mobile and Web Front End

March 2014 - June 2017

Built and managed up to three engineering teams delivering native iOS, Android, web, GraphQL, and data-pipeline systems. Combined team leadership, hiring, technical standards, and hands-on platform engineering.

EARLIER SYSTEMS EXPERIENCE

1999-2014: Web, reporting, financial-market, EDI, and line-of-business systems, followed by native mobile, APIs, and microservices. Technologies included Python, PHP, Perl, C#, Rails, Django, SQL, Objective-C, Java Android, Go, Node.js, and JavaScript.

SELECTED WORK AND ENGINEERING PRACTICE

Interactive products - mobile, web, and card-game prototypes. Human playtesting and device validation remain outstanding. Codex and Claude assist development; local AI inside the game remains an exploration, not a verified capability claimed here.

Breaking Agents to Build Better Ones - presentation material on the OWASP Top 10 for LLM Applications. sandkcampbell.com/talks/summit-owasp-llm-top-10

Trust Boundary - public writing and runnable local AI security labs. The LLM01 RAG example is a deterministic demonstration on synthetic fixtures, not a measurement of real-model resistance. sandkcampbell.com/blog
